

# AQUAGAUGE™ DIGITAL WIRELESS WATER LEVEL SENSORS

- Multiple uses, including dams, wells, streams, irrigation channels.
- State-of-the-art electronics, no moving parts.
- Low cost, minimal maintenance.
- Install in a water tank in minutes.
- Measure water level from a distance of around a kilometer.
- Measure and record level changes of up to 8 tanks at once.
- Measure to a depth of 10 meters.
- Optional data output to PC.
- Can be used in all water tanks, above or below ground.
- Superior to older mechanical-type systems, uses differential pressure sensor for water level reading

AQUAGAUGE™ digital wireless water level sensors represent the modern way stored water can be monitored. Now you can see at a glance from hundreds of meters away from your tank how much water is remaining. The level will be sent by radio transmission to your hand-held battery-powered display every 10 seconds. Plastic, concrete or metal, above or below ground, all tanks can be continuously monitored. If you are dependent on your own private supply of water there is no better way to measure and regulate your usage than with an AQUAGAUGE.™
